

Jira Project Setup

Issue types, custom fields, workflow, and JQL queries

Document ID: DORA-ARCH-0.3 | Date: 2026-03-13 | Status: Complete

Project Configuration

Setting	Value
Project name	DORA Demo App
Project key	DORA
Project type	Scrum
Board type	Scrum board with sprints

Issue Types

Issue Type	Purpose	DORA Metric
Story	Feature work — represents a change being developed	Lead Time for Changes
Bug	Defect work — also represents a change	Lead Time for Changes
Incident	Production failure triggered by a bad release	Change Failure Rate + MTTR
Task	Optional: manual deployment log entries	Deployment Frequency (fallback)

Custom Fields

Field Name	Type	Used On	Purpose
Deployment Version	Text (single line)	Story, Bug	Links ticket to the GitHub release tag that shipped it
First Commit Date	Date	Story, Bug	Timestamp of first commit — lead time start point
Incident Severity	Select list	Incident	P1 / P2 / P3 — filter high-severity for CFR calculation
Linked Release	Text (single line)	Incident	GitHub release tag that caused this incident

Incident Severity select options: P1 (Critical), P2 (Major), P3 (Minor)

Workflow

Stories and Bugs follow the standard delivery workflow:

[To Do] → [In Progress] → [In Review] → [Done]
■ [Cancelled]

Incidents follow an incident response workflow:

[Open] → [Investigating] → [Resolved]

DORA Metric Mapping to Jira Fields

DORA Metric	Calculation	Jira Fields Used
Lead Time for Changes	Avg time: First Commit Date → Story status Done	First Commit Date (custom), status change log
Change Failure Rate	Count(Incidents) / Count(Releases) in period	Incident issue type, Linked Release field, created date
MTTR	Avg time: Incident created → Incident status Resolved	status change log (Resolved timestamp)

Key JQL Queries

Stories reaching Done (proxy for deployments shipped) in a date range:

```
project = DORA AND issuetype in (Story, Bug)
AND status changed to Done after "2025-09-01"
```

All incidents (change failures):

```
project = DORA AND issuetype = Incident
AND created >= "2025-09-01"
```

Resolved incidents for MTTR calculation:

```
project = DORA AND issuetype = Incident
AND status = Resolved
AND created >= "2025-09-01"
```

Incidents linked to a specific release (for CFR):

```
project = DORA AND issuetype = Incident
AND "Linked Release" = "v1.4.0"
```
